

ABSTRACT

An Infant Nurturing Device for performing parent-infant attachment comprising a pouch area (25), a proportional external pouch covering (21), means for producing simulated parental body temperature (770), means for producing simulated parental heartbeat (750),
5 means for producing simulated parental voice (780), means for producing simulated parental breathing (760) and a controller (740). The Infant Nurturing Device of the present invention is capable of performing adequate “Kangaroo Care” parent-infant attachment in the absence of biological parents.
